

Analogue Outdoor Weather Station (Metal) incl Barometer, Hygrometer & Thermometer - 38cm

Product Images

Short Description

- Made in Germany
- Weather station in a sleek design made of metal
- With barometer, thermometer and hygrometer

- Measures air pressure, temperature and humidity
- Precise Domatic-Barometer for weather forecast
- Weatherproof.

Description

This timeless weather station made of metal and painted in anthracite is ideal for the entrance area, balcony or terrace. It consists of a barometer, a thermometer and a hygrometer.

The barometer measures air pressure and allows you to make a local weather forecast. Whilst the weather improves with increasing air pressure, a decreasing air pressure means that you should expect bad weather. The thermometer indicates the temperature and the hygrometer the humidity. This gives you a comprehensive picture of the current and future weather conditions.

The movements are entirely manufactured in Germany.

The barometer is manufactured by the German company TFA Dostmann, and is built to withstand the elements all year round.

There are three dials – one for temperature, one for humidity, and one for the all-important barometric pressure.

This barometer is shipped from us in safe transportation mode, and will arrive to you unset. This is so that the needle does not move in transit, and therefore become damaged. On arrival, the barometer needs to be manually set to your local air pressure, which you can find online from various resources. This process is very simple, and can be done by simply turning a screw on the back to make the needle move to the required position. Once the barometer is set, it is ready for use.

Additional Information

Brand	TFA Dostmann	
Explanation	Diameter work	108/108/108 mm
	Material	Metal
	Assembling	Wall mounting
	Dimensions	(L) 138 x (B) 40 x (H) 380 mm
Barometer Style	Modern	
Barometers Designed for	Outdoor	
Material	Metal
